FRAME OF LED LIGHT FIXTURES

weight: 25 g

MADE IN POLAND

KONEKTO is the latest family of LED ceiling light fixtures manufactured by ZAMEL. Each fixture consists of a source of light and a frame. These elements may be freely combined to create fixtures adapted to the individual needs of the user.

Offered frames are available in various colour versions. A unique possibility of combining square plastic frames allows you to create interesting and customised illumination.

KONEKTO fixtures mean not only unique design but also a quick and convenient assembly. The thickness of assembled fixtures is only 38 mm. Due to their small size, light sources may be installed in dropped ceilings with a thickness of 42 mm (30 mm section and 12,5 mm drywall).

To create a complete fixture for the frame, you should purchase a light source with a ring.
